

OTHER HOME ELECTRICAL SAFETY TIPS

- ✓ Have a licensed electrician install safety switches on all your circuits and regularly test them yourself.
- ✓ Have your solar PV system inspected and maintained every year.
- ✓ Look up and live—be aware of your overhead main power line when cleaning gutters or carrying ladders.
- ✓ Check that insulation material in your ceiling is not covering electrical fittings, especially down lights.
- ✓ If you have a private power pole, inspect it regularly.
- ✓ Take care when using electrical equipment near water, including swimming pools, ponds and in the bathroom.
- ✓ Only use electrical equipment for its intended purpose.
- ✓ Look for the Regulatory Compliance Mark when purchasing new equipment to ensure it complies with Australian Safety requirements.

IF THE POWER IS ON, YOU COULD GET AN ELECTRIC SHOCK.

There are serious electrical safety risks in roof spaces.

Whether you're a homeowner or a tradie, there's one simple thing you can do to make it safer before you go up there—turn off all the main power switches at the switchboard.

A little reminder that could save a life

Once you've turned the power off, take steps to ensure that someone else doesn't turn it back on while you're in the roof space. This includes letting someone know you're going up into the roof space.

When you're up in the roof space, even with the power off, avoid contact with electrical cables and equipment as some circuits may still be live.

Use torches and cordless tools so you don't need power when you're in the roof space.

There could be other hazards up there too, some not easily identified, including excessive heat, dangerous vermin, sharp objects or asbestos-containing materials.

ALWAYS TURN THE POWER OFF FIRST

Switch off for safety—it's the law!

It's now a legal requirement for workers and persons conducting a business or undertaking to de-energise a domestic building's electrical installations before entering the roof space.

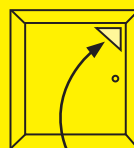

This means if you have a tradesperson coming to work in your roof space, they will be required to switch off the power at the main switchboard before they can enter the roof space.

Never do your own electrical work

It is illegal and can affect your home insurance. Installing or repairing electrical equipment or cables must only be done by a licensed electrician.

Always turn the main switches off first

Place these stickers at your home to warn your family or anyone else working in your home that they should turn off the main switches at the switchboard before going into the roof space.

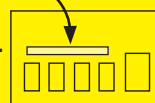

Peel off this sticker and place it on the manhole used to access the roof space.

SWITCH YOUR POWER OFF

**TURN OFF ALL MAIN SWITCHES
BEFORE GOING INTO THE ROOF SPACE**

Place this sticker inside your switchboard.
